

## ASSESSMENT TOOLS: DEFINING THE ISSUE

WIN's Assessment Tools help institutions to define the magnitude of an integrity issue in a sector or region, prioritize risks to be addressed, and measure progress achieved, using methods such as problem diagnosis, benchmarking, and monitoring.

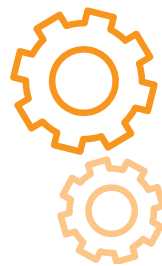

### WHO THEY'RE FOR:

- National and local public water and sanitation sector institutions, local government

### WHAT THEY DO:

- Clearly **quantify and qualify integrity issues**
- Provide **credible measurement of integrity risks**, based on indicators and the perception of all involved stakeholders
- **Prioritize integrity risks** to be addressed, and **measure progress** achieved

Collecting survey data for a national water integrity and governance assessment for Benin, 2017

### KEY TOOLS:

- **Annotated Water Integrity Scan (AWIS):** a means to quickly assess the integrity situation in the water sector at national or local level, through a participatory workshop, during which stakeholders score identified risk areas in terms of levels of transparency, accountability and participation.
- **Water Governance Assessment Guide:** A framework and set of guiding questions to help identify key areas of focus, priorities, and challenges for improved water governance, including those related to corruption and integrity.
