

ACTION TOOLS: MANAGING INTEGRITY RISKS IN PROJECTS AND ORGANIZATIONS

WIN's Action Tools help organizations to manage and execute successful water integrity projects, focusing on improving governance and fighting corruption in the water sector through preventive and corrective actions at the level of financial management, procurement, and service delivery.

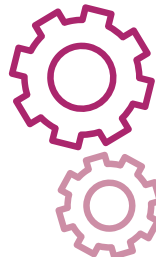

WHO THEY'RE FOR:

- Managers of water sector organizations and utilities
- Project managers in the water sector
- CSOs or community groups running a small water supply system

WHAT THEY DO:

- Enable managers to diagnose root causes of recurring problems and to identify specific integrity risks that affect financial management, human resources or other processes.
- Enable managers to prioritize and identify the appropriate measures to overcome integrity risks
- Provide a framework to motivate and support collective action for integrity
- Support managers to implement realistic integrity roadmaps addressing key risks and monitor progress.

KEY TOOLS:

- **Integrity Management Toolbox for Water Sector Organizations:** an adaptable set of resources to support integrity management for private and public utilities and public water institutions. Trained coaches generally support organizations throughout implementation, in a guided change management process.
- **Integrity Management Toolbox for Small Water Supply Systems:** a set of resources to improve performance of small rural water supply systems and community-managed systems, through better management and governance practices.
- **Integrity Quality and Compliance for Project Managers:** a set of simple project management tools and templates to improve project management and address common integrity issues from planning to operations, specifically in water-related programmes.
